

STRUCTURAL HEART DELIVERY SYSTEMS

STRUCTURAL HEART DELIVERY SYSTEMS DESIGNED FOR EFFICIENT SCALING AND LONG-TERM MANUFACTURING

Bring your custom structural heart delivery systems to market faster with end-to-end solutions throughout every stage of the product lifecycle. Our experts are here to bring un-matched clinical and technical knowledge to your projects, supporting you from early napkin sketch through high-volume manufacturing.

With a vertically integrated supply chain and expertise in materials, rapid prototyping, designing for manufacturability, and advanced manufacturing processes, let's work together to overcome complex challenges and improve lives.

YOUR PARTNER IN BRINGING BETTER MEDICAL DEVICES TO MARKET.

Heraeus Medevio acts as a flexible, tailored, end-to-end extension of your engineering and product development teams. With expertise from materials, development, and pilot production to high volume manufacturing including unmatched clinical and technical expertise, Heraeus device experts will also help you efficiently manage global regulatory and submission requirements.

PRODUCT DESIGN & DEVELOPMENT

Global collaboration hubs committed to design and development with dedicated pilot production lines that can be mirrored in production

MANUFACTURING EXPERTISE

Proven manufacturing technology excellence and superior engineering know-how to solve complex challenges

COMMITTED TO QUALITY

170-year history in materials science and trusted quality

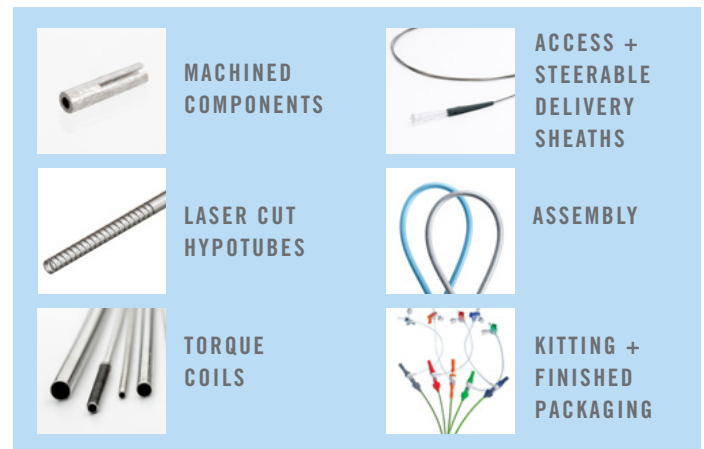

SUPPLY CHAIN OPTIMIZATION

Vertically integrated from concept to completion to simplify your supply chain

Bringing world-class structural heart delivery systems to market presents complex challenges due to several critical considerations:

- Complex delivery requirements
- Large bore devices
- Precise control

Leverage our end-to-end expertise to efficiently scale the design, development, and high-volume manufacturing of your delivery systems and improve lives worldwide.

YOUR CHALLENGES DRIVE OUR INNOVATION

170-YEAR HISTORY IN MATERIALS

- Wire reinforced delivery systems with complex assemblies
- Innovator in torque coil technologies
- Advanced laser cut hypotube solutions
- Vertically integrated capabilities

PROTOTYPING + DESIGN SOLUTIONS

- Dedicated team, equipment, and systems for rapid prototyping
- Focus on design for complex assembly and manufacturability
- Clinical and technical expertise
- Efficient and accurate design iterations
- Performance testing

20+ YEARS MANUFACTURING COMPLEX DELIVERY SYSTEMS AT >1M VOLUME ANNUALLY

Automation

- Co-bots for streamlined production
- Inspection
- Integration of AI solutions

Metal processing

- Braiding
- Lamination
- Coil winding
- Swiss machining
- Laser cutting
- Laser processing
- Welding
- Fusing

Polymer processing

- Reflow
- Tipping
- Fusing
- Lamination
- Extrusion
